

News Release: August 2007

Seating Inc. showcases Intensive Use Chairs and introduces the Contour 350 Task at annual APCO Conference and Exposition

Baltimore, MD.

Seating Inc., manufacturer of American-made ergonomic chairs, exhibited at this year's APCO annual conference and exposition in Baltimore, MD August 6th-8th. Bringing with them samples of their intensive use, 24/7 chairs, Seating Inc. showcased different styles and options specifically configured for dispatchers and monitoring stations. To view the specially designed 911 application chairs, visit the Emergency Professionals section of the Seating Inc. website at www.seatinginc.com/911.

New to their collection is the Contour chair, (far right in photo) which was also shown at the trade show and met with great approvals from attendees who tested it out. The Contour 350 task chair is the new member of Seating Inc.'s family of intensive use, 24/7 chairs.

The Contour backrest substructure is made with compound curves to embrace you with un-believable lumbar comfort, while the seat is made with our incredible 6.2lb density, anti-microbial, energy absorbing TLC memory foam that will support you and won't break down.

Seating Inc. Intensive use chairs are designed to be strong on the inside and sleek, not bulky like other intensive use chairs. The Contour has heavy duty mechanism, arm, and base options, teamed with comfort, style and specialty items to help this chair do its job - working 24/7 with weight loads up to 350 lbs. Available in a variety of fabrics, vinyls or Crypton™ Super Fabrics, the Contour can match and stand out in any work environment.

We know that one size does not fit all, especially when different users need to use the same equipment. With features like back height adjustment, seat depth adjustment, arm width adjustment and wide seat configurations, the Contour can be configured to support people of all shapes and sizes.

All chairs are made-to-order and customized to fit ergonomic needs and budgets. Every chair is built in America & independently tested for long lasting performance. Quality North American made component parts back up a 15 year warranty. Contour models have passed the GSA Intensive Use Test and are on GSA schedule and numerous state contracts. With models starting at \$492.00, the Contour not only is functional, it is also practical for any budget.

W-Cubed, LLC (Wendy Warren - (410) 529-9776, wendywarren4@comcast.net) the representative group for Seating Inc. covering Maryland, Virginia and Washington DC also attended.
